COMMON NAME	DESCRIPTION AND CHARACTERISTICS
AMERICAN ARBORVITAE	Very dark green color year-round. Medium growth rate and very hardy. Used for screening and foundation planting. When young it grows bushy but when it gets to 3-4 feet it grows more pyramidal. They prefer full sun to partial shade and can grow in a variety of soil conditions.
AMERICAN ELDERBERRY	A shrub with large flattened clusters of tiny cream-colored flowers in summer, fragrant; large clusters of small dark purple berries in late summer. Full sun to partial shade; moist, well-drained soils are best, but will tolerate some dryness as well as wet sites; tolerates alkaline soil. Can grow up to 12' tall and 10' wide.
BLACK CHERRY	Tree which bears dark green leaves which turn yellow to red in fall and white flowers which bloom in spring. Also edible fruit in summer. Is a good wildlife species. Grows to a height of 50-60 feet.
BLACK WALNUT	One of the scarcest and most coveted native hardwoods, Used especially for furniture, gunstocks, and veneer. Fragrant leaves. Likes deep, rich, well-drained soil; grows more slowly in drier soils. Grows to 50' to 75', 60' spread. The delicious nuts must be gathered early, before squirrels and other wildlife can consume them.
COMMON LILAC	The Common Lilac is noted for its showy, fragrant bloom in late spring. Flowers come in many colors ranging from white, pink, blue, lavender to reddish-purple, clusters of flowers sit against dark green, heart shaped leaves, and the fragrance is just delightful. Grows best in well drained, fertile soils, under full sunlight.
CONCOLOR FIR	Concolor fir (also known as white fir) is a fairly slow-growing, drought-resistant tree. It does best in deep, rich and well-drained soils. Avoid heavy clay and wet spots, such as near over-irrigated lawns. Concolor fir is tolerant of some shade, although it prefers full sun, and is hardy in zones 3-7.
EASTERN REDBUD	The Eastern Redbud does well in a variety of soils and prefers locations where it receives a minimum of four hours of direct, unfiltered sunlight each day. Growing at a medium rate, it reaches a height of 20-30 feet and a spread of 25-35 feet at maturity
HAZELNUT	A large fast-growing shrub with showy spring flowers. The Hazelnut can grow to 8-12' tall with a crown spread of 10', creating a dense privacy screen, perfect for a hedgerow and as nesting sites for birds. The nuts of this American Hazelnut have a higher nutritional value than acorns and beechnuts, making them a valuable food source for wildlife eaten by turkey, ruffed grouse, and pheasants.
HIGHBUSH CRANBERRY	A generally low maintenance shrub once established that will grow in moist to dry sites with plentiful sun. This North American native has white flowers, and dark green leaves that turn reddish in the fall
NORTHERN RED OAK	One of the faster growing oak trees. Has reddish fall color and grows to a height of 60-75 feet with similar width and a broad rounded shape. Excellent for wildlife planting.
NORWAY SPRUCE	The Norway Spruce is the most widespread, fastest growing, largest and most disease resistant spruce in the northern hemisphere. This is not a tree for a small yard! The Norway Spruce can grow 2-3+ feet per year their first 25 years under good conditions. The Norway spruce has a fibrous deep spreading root system, able to withstand strong winds.
RED MAPLE	Grows to a height of 40-60 feet. A rapid grower that can adapt to a wide range of soil conditions. Fall colors vary from yellow to scarlet.
RED OSIER DOGWOOD	Grows best in moist to wet soils with full sunlight. Average height is 8' and it spreads outward to 6'. Has bright red twigs with white flowers and white berries in the summer. Leaves turn dark red in the fall. The shrub's deep red stems create a pop of color in the snowy, gray months. Fibrous root systems also provide effective erosion control on banks and slopes. Good for providing wildlife food and cover.
SUGAR MAPLE	Sugar Maple thrives when it is planted into rich, moderately deep soils having even moisture coupled with good drainage. Has brilliant red, orange, and yellow fall color.
SWAMP WHITE OAK	The Swamp White Oak is well adapted to low-lying areas with poor drainage but also does well in urban or suburban settings where it can tolerate compacted soil and drought.
WHITE PINE	The White Pine is a large, straight-stemmed tree with a pyramidal crown. Clustered soft blue-green needles. Ideal screen or windbreak. Likes moist, well-drained soils. Grows 50' to 80' with a 20-40' spread.
WHITESPIRE BIRCH	The White Spire Birch is heat tolerance and disease resistant. Grows well in full sun and under a wide range of soil types.
WATER GEL ONE BAG WILL TREAT ABOUT 100 TREES	Water Gel is a powder, which is mixed with water to form a gel that the roots of the seedling are dipped into. The gel acts as a water-holding medium and helps to maintain an even moisture balance around the seedling roots after planting. The gel will remain active for at least one growing season.

TREE PROGRAM IS OPEN TO EVERYONE - YOU DO NOT NEED TO BE A KENOSHA COUNTY RESIDENT TO PARTICIPATE.
