

APPENDIX “E” - - - COMPARATIVE COUNTY BOARD SIZE ANALYSIS

Utilizing the criteria described in this memorandum one can analyze the pros and cons of small, medium size and large county boards.

ANALYSIS OF COUNTY BOARD SIZE										
CRITERIA	VERY SMALL 5 Members		SMALL 7 & 9 Members		MEDIUM 13, 17 & 19 Members		MEDIUM 21 & 25 Members		LARGE 28 Members	
	PRO	CON	PRO	CON	PRO	CON	PRO	CON	PRO	CON
Size of consti- tuency - - - assuming a current population of about 154,000		29,915 less members = less debate, less ideas, less oversight Assumes part-time Supervisors		7 Districts - 21,368 9 Districts - 16,619 less members = less debate, less ideas, less oversight Assumes part-time Supervisor	13 Districts - 11,506 17 Districts - 8,799 19 Districts - 7,872		21 Districts - 7,122 25 Districts - 5,983		5,342 more members = more debate, more ideas, more oversight Co. Ex. is responsible for day to day adminis- tration	
Common interest of constituency		Very diverse constituenc- ies in each district		More diverse					Less diverse / more common interests

City / County Split is 17 City and 11 County

Land Information Note: Nov. 21, 2006

28 Supervisory Information Revised... I matched the totals to totals in the 2001 Census legal descriptions... The majority of the Districts were O.K. but I did find a few with different population counts... The minority information is alright... it just seemed that the total population counts in certain districts were off... but not by much.

Reason for this... I really don't know other than the effect that annexations may have had on the data layer we used... The data in these files correlates with the information from 5 years ago... and should be "solid".

APPENDIX "G" SAMPLE RE-DISTRICTING UTILIZING EXISTING WARD BOUNDARIES

Proposed 13 Supervisory Districts

Based on Existing Ward Boundaries

13 Supervisory Districts [City Districts] Utilizing Existing Wards

13 Districts - Deviation from Target Population

CENSUS BLOCK

A subdivision of a census tract for, prior to 1990, a block numbering area. A block is the smallest geographic unit for which the Census Bureau tabulates 100-percent data. Many blocks correspond to individual city blocks bounded by streets, but blocks -- especially in rural areas -- may include many square miles and may have some boundaries that are not streets. The Census Bureau established blocks covering the entire nation for the first time in 1990. Previous censuses back to 1940 had blocks established only for part of the nation. Over 6 million blocks are identified for Census 2000.

Each one of these block numbers has a data field indicating how many individuals and of what nationality compose the blocks.

100 percent data

Information based on a limited number of basic population and housing questions collected from both the short form and the long form for every inhabitant and housing unit in the United States.

Some items of note... Deviation from target amount averages to be off by 12.42% or 2,695 people... target amount is 11,506. There are 6 Districts that exceed the deviation by 15% and 2 Districts that exceed the deviation by 25%... The largest deviation being 27.29% which translates into a difference of 3,139 people.

Another point of interest is that City and County wards needed to be put together to create Districts. This is found in the Split municipality district figures. The minority difference were not great however there was an adjustment of the location of the districts with the higher minority concentrations.
